License notes

For using the software on a workstation a software license is required. If the software should be used simultaneous on several workstations then software licenses are required for all workstations. There is no price difference between first and additional licenses.

License model

All of our products are delivered as „floating licenses“, managed by a license server. Inside of the company network these licenses can be used on any number of workstations as long as the permitted number of existing licenses will not be exceeded. In the case of a transnational use regional limited licenses are only permitted for a use in the countries of the respective region. A transregional use is only permitted with the world-wide valid licenses of region 1.

Program protection

All licenses are managed with passwords for the license server, included in delivery for free. When changing the license server to a new hardware ID, new passwords are required. The license change from the old license will be made for free.

Upgrade regional license to world-wide license

Regional licenses can be upgraded to world-wide licenses with the „Up2Reg1“ products (available in the regional price lists).

Updates without change of the main version

Updates inside of a main version, e.g. from version 1.0 to version 1.1 are possible without any license costs. Downloads are available from our web site, the SolidSteel parametric installation manager or your local reseller.

Updates with change of the main version, maintenance

Updates with a change of the main version, e.g. from version 1.0 to 2.0 are only available with an active maintenance contract. A maintenance contract includes the right to use the newest software version (Updates) and additional phone, email and remote support for one year, or the individual regulations of your reseller. If there will be no timely cancellation to the end of the time of validity the maintenance will be automatically renewed for more 12 months. The renewal regulations maybe different in the maintenance contracts of your reseller. A maintenance contract for the first year must be ordered obligatory with the order of the software license.

Updates without maintenance, Return-To-Support (RTS)

With the Return-to-Support (RTS) arrangement customers without an active maintenance contract have the possibility to enter subsequently into a maintenance contract. The RTS fee contains the re-entry into a maintenance contract and additionally a maintenance contract for the following year.

Trainings

Training courses can either be carried out in our training center in Siegen, on-site at the customer's premises or as online training.

The costs apply per training, regardless of the number of participants. The number of participants should not exceed 4-6 participants to ensure an optimal individual support. If there are more participants, an individual training concept should be worked out.

In the case of external training courses that do not take place in the Siegen training center or online, travel costs (travel costs, accommodation and expenses) are added to the training costs in accordance with our charging rates applicable at the time.
