Professional Add-Ins for SOLIDWORKS Autodesk Inventor® SIEMENS NX creo elements/direct

DSTV NC data / NC1 data has become an indispensable part of modern steel design,

This is a good thing, but as is so often the case, „one man‘s joy is another man‘s sorrow“, because the templates for manufacturing the parts arrive at the manufacturing plants in all sorts of different formats. Our software, the *DSTV Assistant* has been developed for this very purpose.

The *DSTV Assistant* takes the tedious work out of converting customer data into DSTV NC data, does it in seconds and provide you with the practical tools and features that make your day-to-day work easier.

The basics of profile types and NC block types should, however, be known. Below are the profiles, and on the right is a short beam with some machining, where you can see the most important block types at a glance.
